

BOOTCAMP: TRANSFORMACIÓN DIGITAL PARA LA DOCENCIA TÉCNICA

Nombre del participante:

Institución:

Instituto Nacional de Osicala.

Tema: Script SQL con consultas CRUD y consultas JOIN funcionales sobre la base de datos existente.

Link del Entregable:

<https://github.com/natividadjesusmartinez/Tarea-Base-de-Datos>.

Viernes 05 de junio de 2026

Esquema de la base de datos	3
Consulta 1: 1Ver todos los tipos de acomodación	4
Consulta 2: Ver solo el nombre de cada tipo de acomodacion	5
Consulta 3 : Ver solo el nombre de cada amenity	6
Consulta 4: Ver todos los estados de reserva	7
Consulta 5: Ver todos los locations (países y ciudades)	8
Consulta 6: Contar reservas por estado.....	9
Consulta 7: Ver todos los owners	10
Consulta 8: Ver todas las rooms	11
Consulta 9: Ver solo las rooms que estan disponibles (is_available = true)	12
Consulta 10: Ver solo las rooms que NO están disponibles	13
Consulta 11: Buscar huéspedes por nombre (búsqueda parcial).....	14
Consulta 12: Reviews con promedio de calificación por acomodación.....	15
Consulta 13: <i>Reservas por país de ubicación</i>	16
Consulta 14: Acomodaciones con más de 3 reservas confirmadas.....	17
Consulta 15: Insertar un nuevo pago para una reserva.....	18
Consulta 16: <i>Actualizar disponibilidad de una habitación</i>	19
Consulta 17: <i>Guests con sus reservas (JOIN bookings)</i>	20
Consulta 18: <i>istar huéspedes adicionales por reserva (booking_guests)</i>	21
Consulta 19: <i>Ingresos mensuales del año actual</i>	22
Consulta 20: <i>Huéspedes con más reservas (TOP 10)</i>	23

6	6	Cabin	Small rural or nature-based lodgi...
7	7	Resort	Full-service vacation resort
8	8	Guesthouse	Small privately owned lodging

Consulta 2: Ver solo el nombre de cada tipo de acomodacion

The screenshot shows a PostgreSQL IDE interface. On the left, the 'Object Explorer' pane displays a tree of database objects, with 'Tables (14)' expanded. The main query editor shows a SQL query: `-- 2. Ver solo el nombre de cada tipo de acomodacion` followed by `SELECT type_name FROM accommodation_types;`. Below the query editor, the 'Data Output' pane displays the results of the query in a table format. The table has two columns: 'type_name' and 'character varying (50)'. The results are as follows:

	type_name	character varying (50)
1	Hotel	
2	Hostel	
3	Apartment	
4	House	
5	Villa	
6	Cabin	
7	Resort	
8	Guesthouse	

Consulta 3 : Ver solo el nombre de cada amenity

The screenshot shows a PostgreSQL database management tool interface. On the left, the 'Object Explorer' pane displays a tree of database objects, with 'Tables (14)' expanded. The main query editor shows a SQL query: `-- 3 Ver solo el nombre de cada amenity` followed by `SELECT amenity_name FROM amenities;`. Below the query editor, the 'Data Output' pane displays the results of the query in a table format. The table has one column, 'amenity_name', and ten rows of data. The status bar at the bottom indicates 'Total rows: 10' and 'Query complete 00:00:00.306'.

accommodation_database.db/postgres@PostgreSQL 18*

Query

```
-- 5. Ver todos los locations (países y ciudades)
SELECT country, city FROM locations;
```

Data Output

Showing rows: 1 to 20 of 1

	country character varying (100)	city character varying (100)
1	Reino Unido de Gran Bretaña e Irlanda del No...	Eckernförde
2	República Popular Democrática de Corea	South Angel
3	Qatar	Leconte
4	Kenya	Almeria
5	Fidschi	Vieja Chipre
6	Botsuana	Blanchet
7	Rwanda	Saint Tristan-les-Bains
8	Timor-Leste	North Ryanstad
9	Frankreich	Augsburg
10	Géorgie	Vizcaya
11	Finlande	Baleares
12	Canadá	Bernburg

Consulta 6: Contar reservas por estado

The screenshot displays a database management interface. On the left, a tree view shows the database structure with 'Tables (14)' expanded, listing tables such as 'accommodation_amenities', 'accommodation_types', 'accommodations', 'amenities', 'booking_guests', 'booking_statuses', 'bookings', 'guests', 'locations', 'owners', 'payments', 'reviews', 'rooms', and 'staff_users'. The main area shows a SQL query for counting reservations by status. Below the query, the 'Data Output' tab is active, showing a table with 6 rows and 2 columns: 'status_name' and 'total_reservas'. The results are as follows:

	status_name	total_reservas
1	Confirmed	24
2	Pending	20
3	CheckedIn	16
4	NoShow	14
5	Cancelled	14
Total rows: 6	Query complete 00:00:00.349	

The SQL query in the editor is:

```
-- 6. Contar reservas por estado
-- =====
SELECT
    bs.status_name,
    COUNT(b.booking_id) AS total_reservas
FROM bookings b
INNER JOIN booking_statuses bs ON b.booking_status_id = bs.booking_status_id
GROUP BY bs.status_name
ORDER BY total_reservas DESC;
```

Consulta 7: Ver todos los owners

The screenshot shows a PostgreSQL database management tool interface. On the left, the 'Object Explorer' pane displays a tree of database objects, with 'Tables (14)' expanded. The main query editor shows a SQL query to select all records from the 'owners' table. The 'Data Output' pane displays the results of the query, showing 12 rows of data with columns 'first_name', 'last_name', and 'company_name'.

Query:

```
-- 7. Ver todos los owners
SELECT first_name, last_name, company_name FROM owners;
```

Data Output:

	first_name character varying (100)	last_name character varying (100)	company_name character varying (150)
1	Angel	Hierro	Laboratorios Canales-T...
2	Hugo	Bellido	[null]
3	Karolina	Nieto	Graham-Chavez
4	Hermann-Josef	Hartmann	Zimmerman Inc
5	Cristina	Leduc	Bahena, de Anda y Ojeda
6	Ruy	Macias	[null]
7	Christopher	Baron	[null]
8	Michele	Feliciano	Schneider
9	Anunciación	Real	[null]
10	Ignacio	Stafford	Robinson-Brock
11	Arnaude	Clark	Pires
12	Philippe	Ruiz	[null]

Consulta 8: Ver todas las rooms

Consulta 15: Suma total de payments por booking (GROUP BY)

The screenshot displays a PostgreSQL client interface with a sidebar on the left showing a tree view of databases and schemas. The main window is divided into three panes: a query editor, a query history pane, and a data output pane.

Query Editor: The query is as follows:

```
221 LEFT JOIN reviews r ON a.accommodation_id = r.accommodation_id
222 GROUP BY a.accommodation_id, a.name;
223
224 -- 15. Suma total de payments por booking (GROUP BY)
225 SELECT b.booking_id, SUM(p.amount) AS total_pagado
226 FROM bookings b
227 LEFT JOIN payments p ON b.booking_id = p.booking_id
228 GROUP BY b.booking_id;
229
```

Data Output: The results are displayed in a table with the following columns: `booking_id` (PK) and `total_pagado`.

booking_id	total_pagado
1	55
2	27
3	23
4	56
5	91
6	58
7	8
8	87
9	74

The status bar at the bottom indicates "Total rows: 100", "Query complete 00:00:00.293", and "Ln 225, Col 1".

Consulta 16: Actualizar disponibilidad de una habitación

The screenshot shows a PostgreSQL IDE interface. On the left, a sidebar displays the database structure, including servers, databases, and schemas. The main window shows a SQL query being executed. The query is as follows:

```
290 -- 15. Payments con metodo creditcard o paypal (IN)
291 SELECT * FROM payments WHERE payment_method IN ('CreditCard', 'PayPal');
292
293
294 -- 16. Accommodations que NO son Hotel (NOT IN)
295 SELECT * FROM accommodations WHERE accommodation_type_id NOT IN (SELECT accommodation_type_id
296 FROM accommodation_types WHERE type_name = 'Hotel');
297
298
299
```

Below the query editor, the 'Data Output' tab is active, displaying the results of the query. The results are shown in a table with 8 columns: accommodation_id, owner_id, accommodation_type_id, location_id, name, and description. The table shows 17 rows of data.

accommodation_id [PK] bigint	owner_id bigint	accommodation_type_id integer	location_id bigint	name character varying (150)	description text
1	1	9	19	Rustic Lodge Ville	Asimismo mes principios peso joven.
2	2	14	13	Rustic Hideaway Ville	Democratic change vote participant institution.
3	3	10	6	Boutique Retreat Ville	Eran buenos natural. General victoria rey su.
4	4	10	4	Modern Escape Ville	La m civil he existencia recursos. Donde próximo sociales vuelve palabra niñ
5	5	10	2	Panoramic Stay Ville	Quinze exiger auquel déposer personne. Rejoindre puissant escalier approach
6	6	18	3	Rustic Getaway de la Monta...	Couper respect soutenir enfoncer encore.
7	7	17	4	Panoramic Getaway dan	María pregunta hasta siete esos.
8	8	2	3	Cozy Lodge Ville	Et considérer poste fait retomber disparaître. Prononcer avenir observer sair
9	9	19	8	Rustic Nest hneuf	Deer habitar naessane respecter assez blanche

At the bottom of the interface, a status bar indicates 'Total rows: 17', 'Query complete 00:00:00.182', and the current cursor position 'Ln 298, Col 1'.

Consulta 17: Guests con sus reservas (JOIN bookings)

The screenshot displays a PostgreSQL query editor interface. The left sidebar shows a tree view of the database structure, including Servers (2), PostgreSQL 17, PostgreSQL 18, and Databases (5). The 'accommodation' database is selected, showing its schema (public) with various tables like Aggreg, Collatic, Domain, FTS Co, FTS Dic, FTS Pa, FTS Te, Foreign, Funcic, Materi, Operat, and Proced.

The main query editor shows the following SQL query:

```
302 WHERE NOT EXISTS (SELECT 1 FROM bookings b WHERE b.guest_id = g.guest_id);
303
304 -- 17. Accommodations que tienen mas de 3 rooms (HAVING)
305 SELECT a.name, COUNT(r.room_id) AS total_rooms
306 FROM accommodations a
307 INNER JOIN rooms r ON a.accommodation_id = r.accommodation_id
308 GROUP BY a.accommodation_id, a.name
309 HAVING COUNT(r.room_id) > 3;
310
```

The 'Data Output' tab shows the results of the query, displaying 11 rows (rows 1 to 11). The results are as follows:

	name	total_rooms
1	Cozy Lodge Ville	6
2	Modern Escape Ville	4
3	Luxury Escape de la Monta...	4
4	Boutique Retreat Ville	4
5	Rustic Retreat furt	6
6	Panoramic Suite Ville	5
7	Rustic Lodge boeuf	5
8	Boutique Nest boeuf	6
9	Panoramic Stay Ville	5

The status bar at the bottom indicates 'Total rows: 11' and 'Query complete 00:00:00.175'. The editor also shows 'Showing rows: 1 to 11' and 'Page No: 1 of 1'.

Consulta 19: Subconsulta correlacionada: accommodations con mas reviews que el promedio

The screenshot displays a PostgreSQL IDE interface. On the left, a tree view shows the database structure, including servers, databases, and schemas. The main query editor shows a SQL query that uses a correlated subquery to find accommodations with more reviews than the average. The query is as follows:

```
-- 19. Subconsulta correlacionada: accommodations con mas reviews que el promedio
SELECT a.name, COUNT(r.review_id) AS total_reviews
FROM accommodations a
INNER JOIN reviews r ON a.accommodation_id = r.accommodation_id
GROUP BY a.accommodation_id, a.name
HAVING COUNT(r.review_id) > (
    SELECT AVG(review_count) FROM (
        SELECT COUNT(review_id) AS review_count FROM reviews GROUP BY accommodation_id
    ) AS subq
);
```

Below the query editor, the 'Data Output' tab shows the results of the query. The results are displayed in a table with two columns: 'name' and 'total_reviews'.

	name	total_reviews
1	Cozy Lodge Ville	4
2	Boutique Stay Ville	4
3	Rustic Retreat furt	4
4	Rustic Lodge boeuf	5
5	Panoramic Stay Ville	4
6	Rustic Hideaway Ville	4
7	Luxury Nest Villa	4

The status bar at the bottom indicates 'Total rows: 7' and 'Query complete 00:00:00.222'. The page number is 1 of 1, and the cursor is at line 389, column 14.
